
(a) Linear scale
(b) Log–log scale
Cracking time T (s)
Number of attempts A ($\times 10^6$)
Number of attempts A
Proportional line through origin (same slope)
full, L=1
full, L=2
digits, L=4
full, L=3
lowercase, L=4
alphanumeric, L=4
full, L=4
OLS: slope = 1.081 µs/attempt, R^2 = 0.990
